Barplot of Enriched GO Terms
alpha−beta T cell activation
T cell differentiation
lymphocyte mediated immunity
T cell receptor signaling pathway
lymphocyte differentiation
antigen receptor−mediated signaling pathway
regulation of leukocyte cell−cell adhesion
regulation of T cell activation
immune response−activating cell surface receptor signaling pathway
immune response−regulating cell surface receptor signaling pathway
immunological synapse
external side of plasma membrane
alpha−beta T cell receptor complex
cytosolic ribosome
cytosolic large ribosomal subunit
plasma membrane signaling receptor complex
T cell receptor complex
postsynaptic density
coated vesicle membrane
ribosomal subunit
coreceptor activity
cytokine receptor activity
immune receptor activity
cytokine binding
T cell receptor binding
MHC protein complex binding
structural constituent of ribosome
MHC class II protein complex binding
phosphotyrosine residue binding
chemokine binding
